AB 3 β -Hydroxy- or -acyloxy-5,6-secocholestan-5-on-6-al phenylhydrazones or the corresponding derivs. of other 5(6)-unsatd. sterols were reduced, the 3-OH group optionally set free, and the resulting amines substituted or quaternized to give the title compds., useful, as pharmaceuticals. Thus, 1 g. 3 β -acetoxy-5,6-secocholestan-5-on-6-al phenylhydrazone (I) in 150 cc. glacial AcOH was reduced with 6 moles H in the presence of Pt (from 50 mg. PtO₂), the catalyst filtered off, and the filtrate worked up conveniently to give 3 β -acetoxy-5,6-seco-5-hydroxycholestan-6-ammonium acetate (IIa), m. 198° (decomposition). The free amine (II) gave the following derivs.: N-benzoyl derivative m. 262°; benzylidene derivative m. 245-6°. II on saponification with methanolic KOH at room temperature gave 5,6-seco-3 β ,5-dihydroxy-6-amincholestan-6-yl phenylhydrazone, m. 231°. I (0.2 g.) reduced by LiAlH₄ in 50 cc. Et₂O gave 5,6-seco-3 β ,5-dihydroxycholestan-6-al phenylhydrazone, m. 203-4° (MeOH), λ 270 m μ , which on catalytical reduction gave amorphous 5,6-seco-3 β ,5-dihydroxy-6-amincholestan-6-yl phenylhydrazone, m. 194°, λ 270 m μ , which on further reduction under the same conditions gave II. IIa (1 g.) in 20 cc. 85% HCO₂H heated 2 hrs. with 2 cc. aqueous 40% CH₂O, the mixture concentrated, the residue taken up in dilute NaOH, extracted with Et₂O, the extract washed, dried, and concentrated gave 5,6-seco-3 β ,5-dihydroxy-6-dimethylaminocholestan-6-yl phenylhydrazone (III), m. 172° (EtOAc); HCl salt m. 280-3° (MeOH-EtOAc). III (0.2 g.) in Et₂O and excess MeI kept 4 weeks at room temperature gave 5,6-seco-3 β ,5-dihydroxycholestan-6-trimethylammonium iodide, m. 194° (EtOAc).
